

Kindergarten Program

We believe that academic success requires the student to be at the center of their learning experience while making positive connections with their peers, and this is exactly what our Kindergarten program is designed to provide!

We encourage skills such as critical thinking and problem solving to promote independence and open-ended learning. Our curriculum materials are uniquely hand-picked and designed to provide a hands-on and practical approach to subjects such as Language Arts, Math, Science and Social Studies. Aside from the core four areas of study, our Kindergarten teachers invest time in additional academics such as Art Expression, Music and Movement, and STEM.

Each child deserves an enjoyable and rewarding learning process and our mission is to provide a learning environment that is constantly challenging each individual child and allowing them to grow. Our goal is to make it the best possible place for your child to get their start to a great education!
